

UMA VIGNESH

Aspiring Software Developer — Problem Solver — Tech Innovator

Email: dosapatiumavignesh@gmail.com — Phone: +91-8500040962

GitHub: umavignesh13 — LinkedIn: umavignesh13 — LeetCode: umavignesh13

Summary

Detail-oriented and research-driven data science student skilled in analyzing data, identifying patterns, and deriving actionable insights. Passionate about applying data analytics to enhance learning experiences and support research-based educational innovation. Strong foundation in Python, SQL, and statistical analysis.

Education

Vignan University, Andhra Pradesh - B.Tech in Data Science	2022 – Present
Sri Chaitanya Junior College, Guntur - Intermediate (MPC)	2020 – 2022
Sri Chaitanya Techno School, Guntur - SSC	2020

Technical Skills

- **Languages:** Python (OOP and Problem Solving), SQL
- **Web Technologies:** HTML, CSS, JavaScript
- **Tools:** Git, MySQL, Jupyter, VS Code, Google Colab
- **Core Concepts:** DSA, Cloud Computing, Data Analysis, Big Data, Machine Learning

Projects

- **Comparative Analysis of ML and DL Models for Stock Price Prediction** - Python, ML, DL
Designed and compared multiple ML and DL models including Linear Regression, SVM, RNN, LSTM, and DNN across different stock market datasets. Performed data preprocessing, feature scaling, and time-based data splitting for model evaluation. Trained models to forecast stock closing prices and analyzed performance using evaluation metrics. Created visualizations to compare true and predicted values for better interpretability.
- **Employee Performance Analysis** - Python, SQL
Analyzed employee performance data to identify key factors influencing productivity and satisfaction. Executed 30+ SQL queries and created visual reports using Python to explore salary, overtime, and training insights. Enabled data-driven HR decisions through clear performance and retention trend analysis.
- **College Gate Entry and Exit Record System** - React.js, PHP, MySQL
Developed a full-stack web application to manage and monitor gate entries and exits of faculty and students. Implemented secure data handling and automated record storage using PHP and MySQL backend. Designed a user-friendly React.js interface for adding, viewing, and searching visitor records. Integrated real-time updates and search functionality for quick access to visitor details. Enhanced operational efficiency by reducing manual record-keeping and improving tracking accuracy.
- **IoT-based Smart Farming System** - Arduino, Sensors, Python
Developed an IoT-based model to monitor soil temperature and humidity in real time. Integrated multiple sensors with Arduino for continuous environmental data collection. Implemented Python scripts for data analysis, visualization, and alert generation. Aimed to optimize irrigation and improve overall crop yield efficiency.

Additional Information

- **Certifications:** Learning Analytical Tools, Data Analytics with Python, SQL Essentials
- **Achievements:** Led Kho-Kho teams as captain and won inter-college tournaments; Secured 2nd place in VVIT Hackathon for AI-based solution delivery
- **Extracurricular:** Coordinator for Informal Events at Mahotsav Fest (2023, 2024)
